Notes:

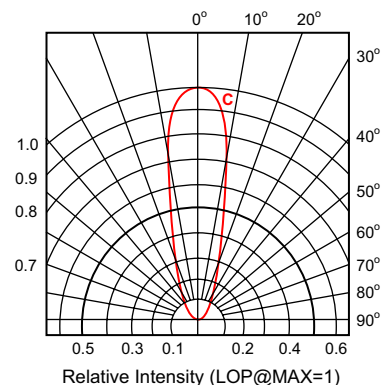

1. All dimensions are in millimeters (inches).
 2. Tolerance is $\phi 0.25$ (.010")mm unless otherwise noted.
 3. Protruded resin under flange is 1.0mm (.04") max
 4. Lead spacing is measured where the leads emerge from the package.
 5. Specifications are subject to change without notice.
 6. Caution in ESD: Static Electricity and surge damages the LED.
- It is recommend to use a wrist band or anti-electrostatic glove when handling the LED. All devices, equipment and machinery must be properly grounded.

Remarks:

1. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve.
2. $\theta_{1/2}$ is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
3. The dominant wavelength (λ_d) is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.
